Yangon, Myanmar

I'm a Senior Full-Stack Software Developer who builds and maintains business-critical software across frontend, backend, and mobile. I began building personal projects in 2021 and moved into professional software development in 2023. Today, I work primarily with JavaScript and TypeScript, React, Next.js, Node.js, Express, React Native, Microsoft SQL Server, and PostgreSQL. I also have experience with Flutter, Firebase, and MongoDB.

EXPERIENCE

Alliance for Microfinance in Myanmar

Mandalay, Myanmar

Senior Software Developer

Jan 2026 – Present

Software Developer

Apr 2024 – Dec 2025

- Sole developer for an internal Risk Management Platform that moved paper-based monitoring into an integrated web and mobile workflow — its delivery contributed to promotion to Senior Software Developer.
- Sole developer for a substantially larger internal Audit Management Platform (roughly 4x the scope of the risk platform), currently nearing completion.
- Maintain and extend an inherited company-wide HR Management ecosystem (React web, Node.js/Express backend, React Native mobile, SQL Server) — including a fiscal-year leave-carry migration and JWT authentication hardening.
- Translate business processes and cross-team requirements into production software while collaborating with a project team and business stakeholders.

Flutter Developer

Nov 2023 – Apr 2024

- Sole application and feature developer for AMZ Whisper, an Amazon seller-operations app — first substantial REST API integration.
- Sole application developer for the Lango Competition Dashboard, a Flutter web app built from initial setup through deployment.
- Sole application and feature developer for TalkTask, a voice-first task manager, taken to closed-testing preparation.
- Substantial contributor across Quack Quack delivery apps, Apical Fitness, and Lango Invaders — completing features, resolving defects, and modernizing inherited team codebases.

EDUCATION

University of Technology (Yatanarpon Cyber City)

Bachelor of Engineering (Electronics)

University project awards: Robotic Puppeteer (First Prize, 2019) · Robot Flutist (Best Project, 2018) · Door Security System (Best Project, 2016)

SKILLS

CORE

JavaScript

TypeScript

React

Next.js

Node.js

Express

SELECTED PROJECTS

Full case studies: lwindev.com/projects

Enterprise Risk Management Platform

Digitized paper-based risk monitoring for field officers and managers across a nationwide microfinance network.

Enterprise Audit Management Platform

Unified a multi-stage internal audit process into one system with review, scoring, and closing workflows.

HR Management Ecosystem

Owns and evolves an inherited HR platform used organization-wide, balancing stability with continuous change.

Love Diary

A private mobile app for couples to record memories and stay connected, published under Gorgeous Cyber.
